

Resource Allocation Program (RAP)

Resource Allocation Program (RAP), a major new campus-wide grant program at UCSF for basic and clinical scientists announced. MORE RAP, catalyzed by the Clinical Translational Sciences Institute, brings together grant programs currently administered by:

- The Strategic Opportunities Support Center (SOS) of the CTSI
- The Research Evaluation and Allocation Committee (REAC) of the School of Medicine
- The UCSF-Gladstone Institute of Virology & Immunology Center for AIDS Research (CFAR)
- Several grant programs administered by the Cancer Center

Under RAP, these programs will now have a streamlined application and review process.

For specific information please go to the URL: <http://rap.ucsf.edu/>, to learn about the many funding opportunities that are now available for pilot studies, translational technologies and novel methods, planning grants, and career development.

In addition to announcing this new program, we also request your help in making RAP a success by participating in the review process. Currently, RAP seeks to assemble a large panel of reviewers with expertise to evaluate proposals in multiple areas of basic, clinical and translational research. These reviewers would be called upon as needed to review proposals in which their expertise is required. If you are interested in participating as a potential reviewer, please send a note to rap@ucsf.edu with your name and areas of expertise for reviewing proposals (up to 10 key words).
