

## IACUC Protocol Reviews

A new process has begun that will allow Departmental Safety Advisor to pre-view IACUC applications. All investigators completing their animal use applications may see comments included from this pre-review. This will allow the PI's to have simultaneous review for all IACUC protocols prior to Committee review. The DSAs will check the experimental agents section of the protocols for appropriate regulated material authorizations (Biological Use Authorization, Radiation Use Authorization) and review material use, training and safety issues. Please take special care when completing this part of the applications to prevent delays in the approval process.
